

SOUTH CAROLINA TRAFFIC FATALITY REPORT FOR 2011

Statistics through August 2011

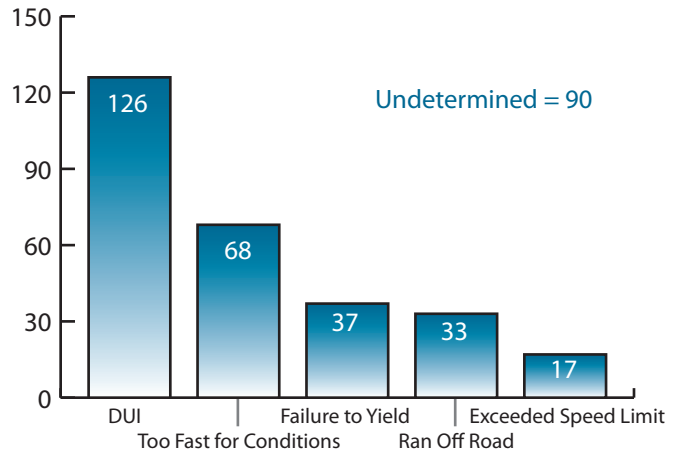

(All data is preliminary)

2007 - 2011 Fatality Comparison through August

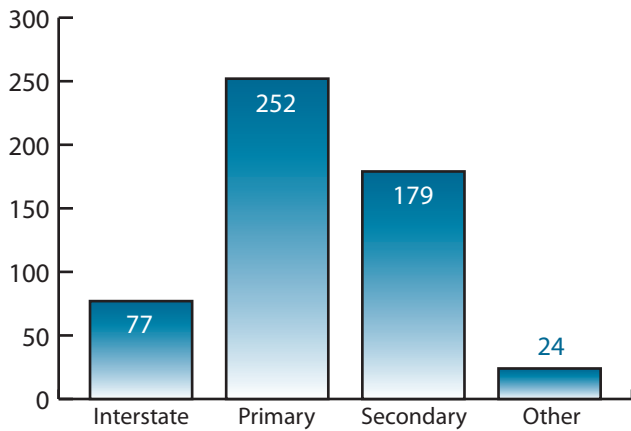

Preliminary data indicates fatalities through August 2011 are nearly 15% below the previous four-year average. However, this is just slightly above (3%) last year's total at this time.

Top Probable Causes

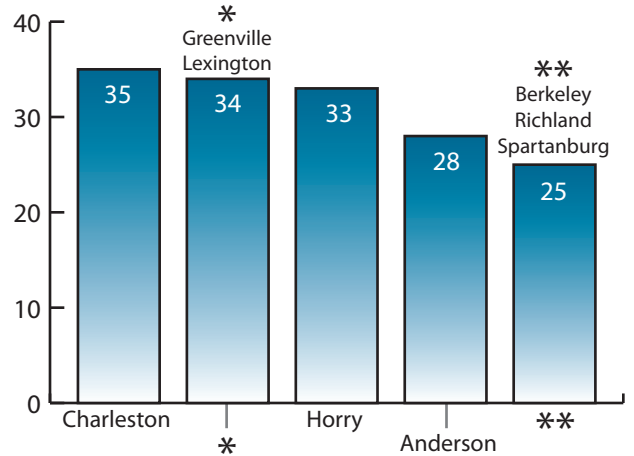

Speed related fatalities (i.e. too fast for conditions and exceeded speed limit) have decreased by 25% compared to last year. However, the 126 DUI fatalities are nearly 30 more than this time last year.

Fatalities by Route Category

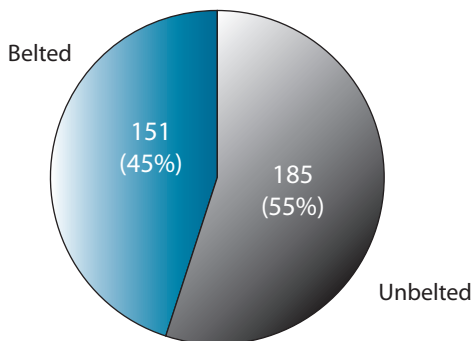

Fatalities on the interstates have increased by nearly 50% over last year. Deaths on secondary roads have increased by 5%.

Top Fatality Counties

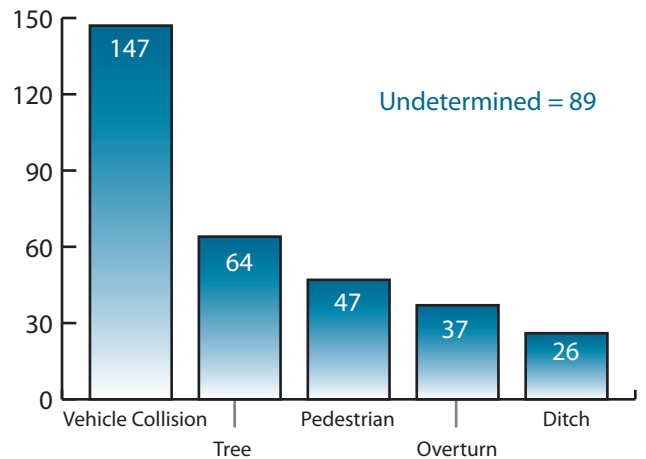

Lexington and Horry Counties have seen the highest increase in traffic deaths in 2011 rising by more than 20% compared to last year.

Fatalities by Restraint Usage

This graphic does not include 196 people (pedestrians, motorcyclists and others) who were killed and did not have access to restraints.

Top Crash Events

For the month of August, 9 fatalities involved a vehicle hitting a tree. Tree crashes are the second leading cause of fatalities in 2011. Pedestrian deaths have increased by more than 20% over last year.
